

ANDRÉ NALIN CHRISOSTOMO

Data Science, statistical analysis, and automation with Python/SQL

Professional focused on data science, statistical analysis, and automation, with a background in information security and software development for interactive experiences.

Valinhos, São Paulo / Brazil

Technical focus

Company	NOVAXD Technology Experience
Role	Developer
Period	08/2022 - present
Language	Advanced English: writing, reading, and speaking
Data	Data science with Python, SQL, analysis, cleaning, automation, and data visualization.
Data	Statistical analysis, critical data reading, patterns, hypotheses, and indicators.
Data	Data capture in physical activations using sensors, position, and interaction events.
Data	Information security applied to investigation, data integrity, and problem solving.

Skills

Data Science	Data Analysis with Python	Data Visualization with Python
SQL	Beautiful Soup	Statistical analysis
Indicators	Pattern interpretation	Hypothesis validation
Python	C#	Unity
Automation	Information Security	Investigation
Problem solving	Agentic AI Development	OpenAI Codex
Advanced English		

Experience

NOVAXD Technology Experience - Developer - 08/2022 - present

Development of applications and interactive activations for museums, events, trade fairs, and brand booths, with growing emphasis on capturing, processing, and interpreting interaction data.

Education

Information Security - Centro Universitário FMU | FIAM-FAAM. Expected completion in June 2026.

Certificates

IBM Data Science	EC-Council - Ethical Hacking Essentials (EHE)
Information Security - FMU	Wireless Pentest

Featured projects

2022/2023

Vaccine Museum

Context

Opened on March 7, 2023 at Parque da Ciência Butantan, the Vaccine Museum was presented as the first museum in Latin America dedicated to the topic. Located in Casa Rosa, a 550 m² house, it uses interactive experiences to explain immunizer production, the immune system, immunological memory, and vaccination.

My contribution

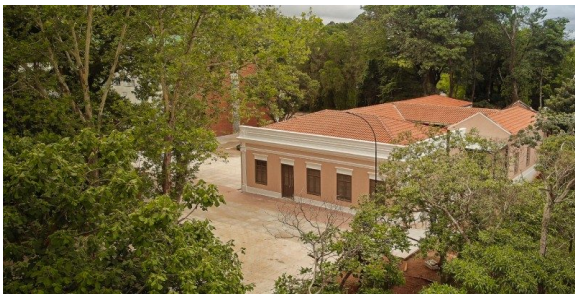

I was responsible for creating and running multiple museum activations, including iPad games about ovoscopy and vaccine production, touch tables to simulate vaccination and infection scenarios, a collective circular table to contain virus spread, and fact-or-fake quiz totems with question logic, answers, and user feedback.

Intacta i2x

Context

Intacta 2 Xtend is a soybean biotechnology platform associated with protection against key crop caterpillars and tolerance to glyphosate and dicamba herbicides. The trade fair activations work as technical communication experiences to explain management, productivity, and field technology.

My contribution

I developed interactions linked to Intacta's cashback system and a visual decision-making experience in which the user had to contain a pest before it took over the crop.

2024

CCXP Minecraft

Context

CCXP24 took place from December 5 to 8, 2024, in São Paulo, as a major pop culture and geek entertainment convention. Warner Bros. Pictures brought an interactive booth with special activations for A Minecraft Movie, connecting film promotion to a physical fan experience.

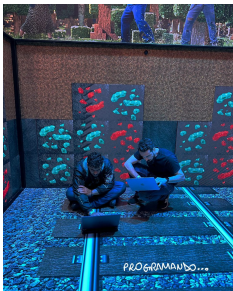

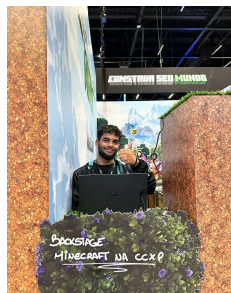

My contribution

I was responsible for the interaction data capture and interpretation system. Using a LiDAR designed for indoor mapping, I built a system capable of detecting laser interference in a defined area, calculating the interference position, and sending that data to the interaction in real time.

Dealer / SemanAudio

Context

SemanAudio São Paulo 2026 was a technical and professional event focused on the audio, lighting, LED, structure, and audiovisual market. Dealer participated with a booth aimed at industry professionals during the São Paulo edition.

My contribution

I developed an interactive quiz to test participants' listening training, with challenges involving stereo perception, frequency, delay, and other technical audio aspects, turning user answers into a comparable result within the experience.
